The cameras themselves are identical apart from the front fascia, according to the parts lists. The Canon model number on the bottom is consistent between marketing names. Images are recorded as JPEGs. Raw image files are not accessible without the use of third party firmware such as CHDK. Canon issued a recall in October 2006 adding these to their recall list. The damaged CCD displays purple or blueish, distorted or possibly no image at all. This problem can be temporarily overcome by removing both the main battery as well as the small internal battery. Canon has acknowledged this issue and formerly repaired free of charge. The reason given is Its missing info about the video recording specifications and the PowerShot Digital ELPH 360 HS a successor to 340 HS model, which was also released in January 5th 2016, alongside 190 IS model. It have a 20.2 MP CMOS sensor with 12x optical zoom and 1080p FullHD video capabilities as opposed to ELPH 190IS model. Smooth curves in a subtle powder blue colour, this beautifully designed 8.0 megapixel, aluminium-bodied camera has a builtin image stabiliser, motion and face detection plus redeye correction. Know how includes brand new. Motion Detection Technology, which senses movement and says goodbye to blur and spoiled photos, while the optical Image Stabilizer lens combats the effects of camera shake. The focus system has been tweaked as well, for improved performance in low light situations. Whatever and wherever you're shooting this season, the Digital IXUS 82 IS looks stunning, and gives flawless results. The perpetual curve body incorporates pure aluminium, giving the camera a smooth yet solid texture and the unmistakable feel of quality that is inherent throughout the Digital IXUS range. The lens gives a 38114mm 35mm equivalent field of view, perfect for the people shots at the heart of Digital IXUS photography. Canon's lensshift optical IS has the advantage over rival ISO-based stabilisation systems because it physically corrects the light path to stabilise the image, rather than simply boosting ISO. Canon's IS produces blurfree images with no related increase in noise. Blur is eliminated by boosting ISO to the optimum level between ISO 80800. The system works intelligently, increasing ISO only when needed, avoiding the

unnecessary increase in noise caused by other, less intelligent, systems. <http://huahan.com/userfiles/40-mm-manual-lens.xml>

The Face Select and Track feature follows a userselected face for as long as it remains in the frame, ensuring excellent results whenever the shutter button is pressed. New AF Point Zoom allows the photographer to magnify the AF frame when the shutter button is pressed half way, so that facial expressions can be checked before shooting. AF performance in low light has been significantly improved to achieve focus in scenes at around one stop darker. Face Detection Technology now includes Face Detection White Balance WB. This function prioritises the colour temperature of the detected face over background colours, setting the optimum white balance for natural skin tones. RedEye Correction is also enhanced for 2008. The popular feature can now remove redeye automatically during shooting, as well as in playback mode. The Digital IXUS 82 IS also includes a realimage zoom optical viewfinder OVF, enabling the screen to be turned off to conserve battery power. Sunset optimises camera settings for improved capture of this popular, but sometimes tricky, photographic subject. The new Trimming function allows users to quickly and easily remove unwanted parts of the image. Trimming integrates with Face Detection to snap to faces, enabling the easy creation of portrait images. The new image can be saved to a separate file, or the original image can be overwritten. The Digital IXUS 82 IS retains My Colors incamera photo effects, Long Play LP Movies and Time Lapse Movies from previous models, making it a highpowered, flexible addition to the Digital IXUS range.
